

`std::false_type`

```
classDiagram
    class std_false_type["std::false_type"]
    class detail_is_constructible_array_type_impl["detail::is_constructible_array_type_impl< BasicJsonType, ConstructibleArrayType, typename >"]
    detail_is_constructible_array_type_impl --|> std_false_type
```

The diagram illustrates a class hierarchy. At the top is a class box for `std::false_type`, which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below this is a larger, shaded class box for `detail::is_constructible_array_type_impl< BasicJsonType, ConstructibleArrayType, typename >`, also divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. A blue arrow with an open triangular head points from the top section of the shaded box to the bottom section of the `std::false_type` box, indicating that the shaded class inherits from `std::false_type`.

`detail::is_constructible
_array_type_impl< BasicJsonType,
ConstructibleArrayType, typename >`
