

std::false_type

```
classDiagram
    class std_false_type["std::false_type"]
    class detail_has_from_json["detail::has_from_json< BasicJsonType, T, typename >"]
    detail_has_from_json --|> std_false_type
```

The diagram illustrates a class hierarchy. At the bottom is a gray-shaded class box for `detail::has_from_json` with a template signature `< BasicJsonType, T, typename >`. It has two empty rectangular slots below its name. Above it is a white class box for `std::false_type`, which has two empty rectangular slots below its name. A blue arrow with an open triangular head points from the top of the `detail::has_from_json` box to the bottom of the `std::false_type` box, indicating that `detail::has_from_json` inherits from `std::false_type`.

detail::has_from_json
< BasicJsonType, T, typename >
